

COMPATIBILITY

The following tank mixes have been tested for physical compatibility with AMISTAR at recommended rates of use and will mix in the sprayer tank. No tests have been undertaken on crop safety or product performance therefore, use is at the user's own risk. Syngenta Crop Protection will support the physical compatibility of 2 or 3-way tank mixes of AMISTAR with any of the fungicides, herbicides, PGRs or insecticides listed. For further information on compatibilities, contact Syngenta Crop Protection on 0800 169 6058.

NOTES

Before using any tank mixture, consult and comply with the recommendations of the partner products. Each product should be added separately to the bulk of the water in the spray tank and thoroughly mixed before adding the next chemical. Always use constant agitation of the sprayer tank during mixing, transportation and application. Spray immediately.

- 1 When mixing AMISTAR + Opus + TERN, use this mixing order. DO NOT use full rates of Opus or TERN.
- 2 When mixing RADIUS or UNIX always add to the sprayer tank first. Always refer to the Syngenta mixing recommendation when using RADIUS or UNIX alone or in tank-mix with other products.
- 3 When mixing Ally Max SX + Starane 2 + AMISTAR, use this mixing order.
- 4 Always add HALLMARK with ZEON TECHNOLOGY to the tank last.
- 5 OSR only.
- 6 Ally Max SX = can read across to all DuPont SU's.
- 7 When mixing with SEGURIS, the maximum dose of AMISTAR is 0.5 l/ha.

Use plant protection products safely. Always read the label and product information before use.
