

Profitable return from AMISTAR – guaranteed

In Brief

Oilseed rape is now the most profitable combinable crop in the rotation at current market prices

The AMISTAR combination of effective disease control and enhanced green leaf retention is consistently proven to:

- raise yields
- deliver higher oil content
- increase profitability

Syngenta guarantees growers a profitable return from AMISTAR

Yield and oil increase guarantees profitable return from AMISTAR

Growers experience and repeated trials over recent seasons have consistently shown that an AMISTAR treatment gives a profitable increase in yield and oil.

The seasonal variability of *Sclerotinia* attack means that returns from fungicides that only control disease may be limited.

But even when *Sclerotinia* disease pressure is low, the green leaf retention and oil content increase with AMISTAR will give a reliable profitable return.

Syngenta is so confident that you'll achieve higher yields and greater oil content, that the profitable return from AMISTAR is guaranteed.

Terms & conditions apply (see overleaf): please contact your local Syngenta Area Manager for full details, and how to get involved in this offer.

Core Recommendations

	Application rate
Yellow bud	0.8–1.0 l/ha
Early to mid flowering	0.8–1.0 l/ha

Always use AMISTAR for the first application. At the second timing a tank mix with additional fungicides may be appropriate according to localised *Sclerotinia* risk.

Seed weevil and pod midge	Application rate
Mid to late flowering	0.075 l/ha

AMISTAR® on Oilseed Rape Guarantee – terms & conditions

For the 2010 to 2011 growing season, we guarantee that the yield from a field of Oilseed Rape (OSR) sprayed with AMISTAR® or PRIORI XTRA® will be greater than the yield from an equivalent unsprayed area in that field, subject to the following terms and conditions:

- In order to benefit from the guarantee, you must register your interest and the location of your 'guaranteed OSR fields' by 8th April 2011 with your local Syngenta Area Manager. Please call 01223 883463 to find out who your local Area Manager is.

Area

- Each guaranteed OSR field must be situated in the UK and must be a minimum 5 ha in size, planted only with OSR.
- There must be an 0.5 ha area untreated (220m of one 24m tramline) in each guaranteed OSR field.
- The remainder of the field must be treated with either AMISTAR® or PRIORI XTRA®, or with AMISTAR® or PRIORI XTRA® included in an approved tank mix at the required rates below ("the Amistar Application"). No other fungicide should be used except on the treated part of the field as part of such an approved tank mix.
- Other than the Amistar Application to the treated sections, the treatment of both the untreated and treated areas should be identical.

Quantity to be applied

- If you are using AMISTAR®, you must apply at least 1.0 l/ha of AMISTAR®, with at least 0.8 l/ha being applied between yellow bud and early flowering. The 2nd application must be applied at mid flowering. The maximum individual dose is 1.0 l/ha.
- If you are using PRIORI XTRA®, you must apply at least 1.0 l/ha of PRIORI XTRA®, with a minimum of 1.0 l/ha being applied between yellow bud and early flowering. The maximum individual dose is 1.0 l/ha.

Good agricultural practice

- The untreated and treated areas in each guaranteed OSR field must be the same OSR variety and soil type.
- The untreated and treated areas in each guaranteed OSR field must have the same Green Area Index (GAI) in spring 2011, prior to application.
- You must use the correct application technique, as recommended by Syngenta, including (without limitation) using 100 l/ha of water and using AMISTAR® 035 nozzles.

Measurement

- You must (at your own cost) use either (i) calibrated yield mapping technology or (ii) a certified weigh bridge to prove

the weight and yield of both the untreated and treated areas of each guaranteed OSR field.

- To prove the yield, you must arrange for oil content testing to be completed at a certified testing lab (at your own cost) of both the untreated and treated areas of each guaranteed OSR field.

Profit calculation

- In the unlikely event that you prove to our satisfaction that the yield from the untreated area is greater than that of the AMISTAR® or PRIORI XTRA® treated area in any guaranteed OSR field we will make the following payments in respect of such field:
 - reimbursement for the cost of the AMISTAR® or PRIORI XTRA® and its application and the cost of the oil content test (but not any calibrated yield mapping technology or weigh bridge expenses) subject to being provided with proof of (i) purchase of AMISTAR® or PRIORI XTRA® and (ii) any such costs incurred; and
 - an amount equal to (i) the difference in yield (as a percentage), multiplied by (ii) the weight of the treated crop, multiplied by (iii) £400/t (being the assumed price for OSR for the purpose of this guarantee).

Other conditions

- If you wish to make a claim under this guarantee, you must submit full details and all supporting evidence (including the results from yield and oil tests) to Syngenta on or before 1700 GMT on 31st October 2011.
- Responsibility for proof of compliance with all of the terms and conditions of this guarantee rests with you and you are therefore advised to keep accurate and complete records (including spray records and photographic evidence).
- Syngenta reserves the right to visit any guaranteed OSR field at any time (upon reasonable notice) to investigate compliance with the terms and conditions of the guarantee.
- Subject to compliance with the terms and conditions of this guarantee, we will make any payment due to you by 31st December 2011.
- The terms of this guarantee are governed by and will be construed in accordance with English and Welsh law.
